

Monalisa Chatterjee is a Post-Doctoral Fellow with the TSU and her work supports the scientific activities of IPCC Working Group II. Before taking up this position she worked as a Research Specialist with UNDP in New York. Monalisa has a PhD in Geography from Rutgers University where her research focused on risk assessment and adaptation in developing countries. Her current research interests are in (1) examining the impact of climate and societal change on the distribution of risks, vulnerability and resilience at local urban scale, and (2) integrating methods using multidisciplinary approaches, and (3) qualitative and quantitative consolidation of findings on adaptation to develop integrated policy frameworks of vulnerability reduction and sustainable adaptation.
